

Other IEMA Courses

A series of courses run in association with SEQM Ltd

Internal EMS Auditor

This 3-day course enables delegates to conduct internal audits of environmental management systems and environmental performance to ensure that these comply with ISO14001 and are effectively implemented. Topics include:

- Company policy, objectives and targets
- Legislative requirements
- ISO14001 requirements
- The documented environmental management system

The course will also raise awareness of the key environmental aspects of the company's products, services and operations

Advanced EMS Auditor

This 5-day course equips delegates with an understanding of how to audit or assess the effectiveness of an EMS to:

- Ensure a broad understanding of the range of environmental aspects, environmental legislation and regulations pertinent to an ISO14001/EMAS organisation
- Prepare individuals to take on the role of 3rd party environmental auditor

Completion of this course allows delegates to obtain up to 10 points towards IEMA registration

Introduction to EMS

This 2-day course provides an understanding of environmental management systems and introduces planning and design issues. It enables delegates to plan for the implementation of a system and touches on:

- Environmental management systems
- Evaluation of environmental aspects and impacts
- Overview of environmental legislation
- Setting objectives, targets and management programmes

EMS Implementation

This 3-day course shows how to implement and design an environmental management system. The course is entirely compatible with, and builds on the learning received from, the 2-day introduction to EMS course.

The course includes:

- Business and the environment
- Writing procedures
- Certification assessment
- Familiarity with ISO14001

All delegates receive a certificate verifying completion of the course. Those delegates who pass both the practical assessment and written examination will receive a certificate of training recognised by IEMA
